

Your Platform & FDE Partner for Successful AX

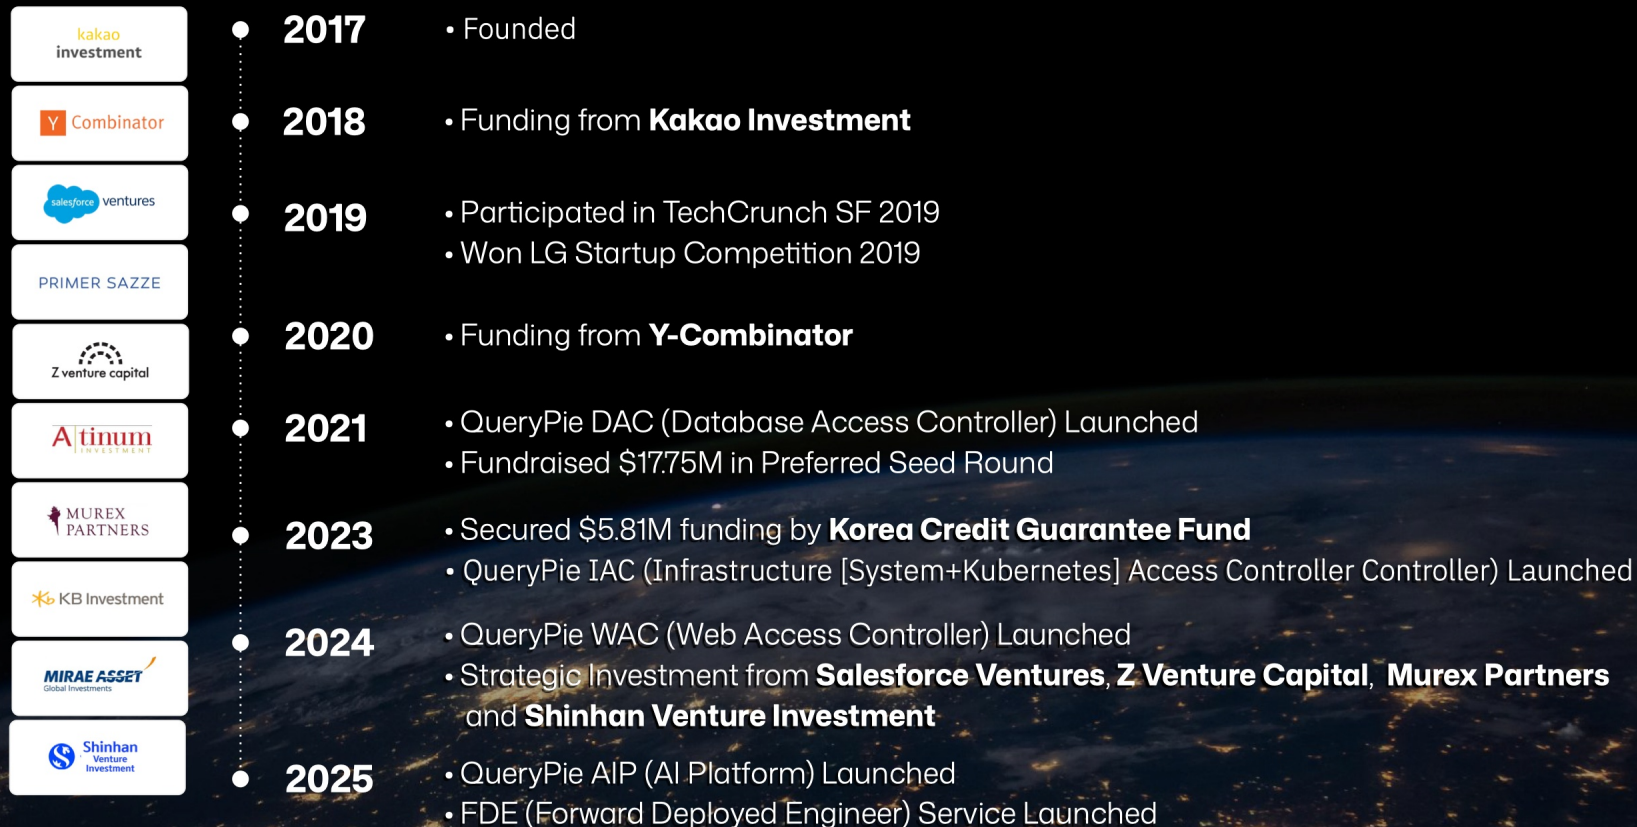

QueryPie ACP Intro

2026.06.17

sales@querypie.com

Our Journey: Raised \$30M+ in Total Funding

Enterprise AI Work OS connecting AI execution and access control

AIP and ACP extend enterprise AI execution and control across AI Pack, FDE, and Apps.

Company Basic Information

Founded	2017
CEO	Hwang Inseo
Website	www.querypie.com
Employees	65
Locations	US · Korea · Japan · Indonesia

Solution Portfolio

Enterprise AI Work OS

AI execution + access control + AI Pack + FDE

AIP

AI Agent execution platform
MCP · RAG · Skills

ACP

AI Control Platform
DB · Server · Web · MCP

AI Pack

AI business security expansion
AI Chat · MAC · UEBA

FDE

field-based AI adoption
PoC · custom Agent

Apps

White-label / Apps partner AI services

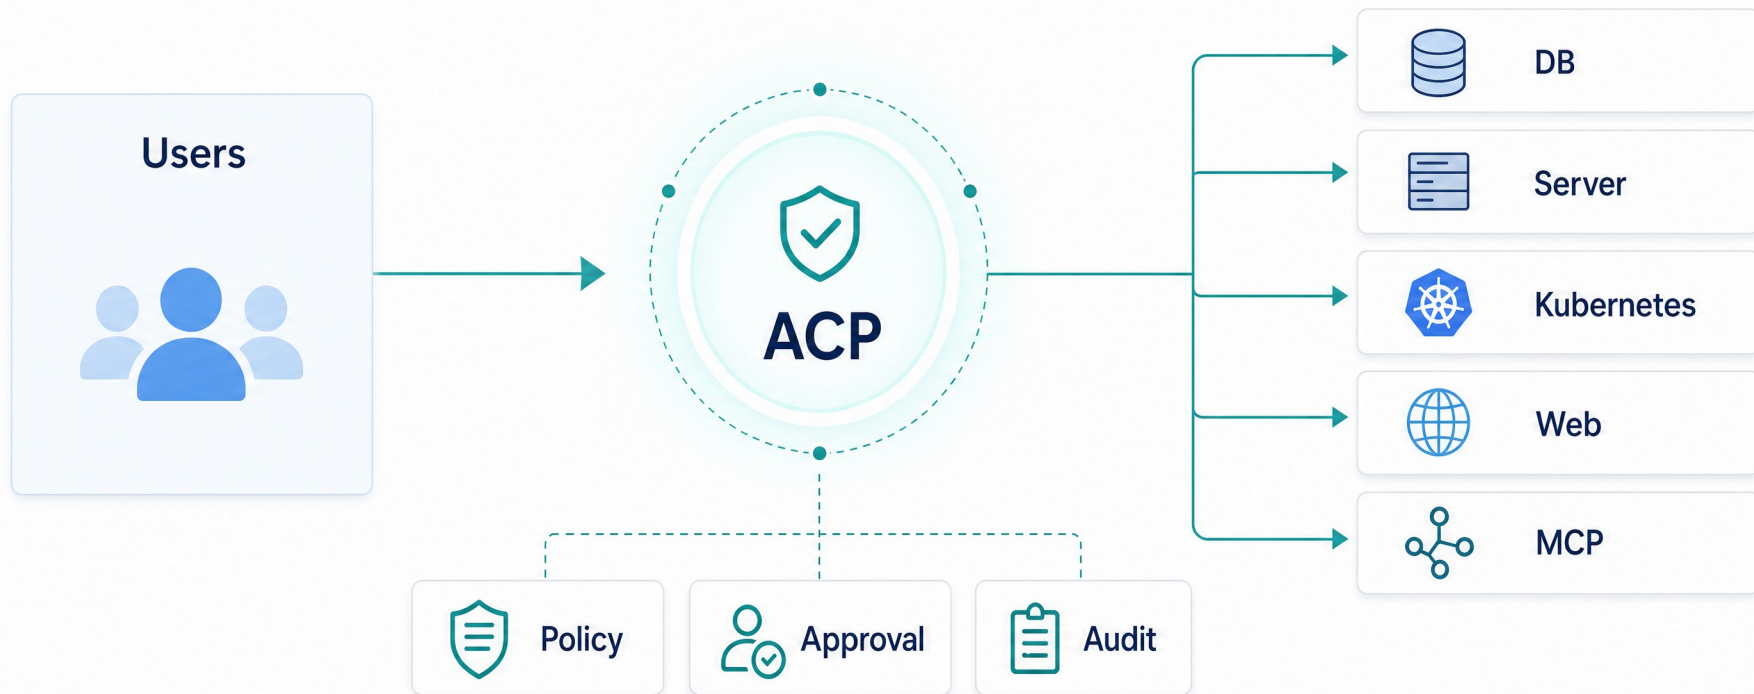

Certifications

Security · Privacy · Cloud · AI Certifications

 ISO/IEC 42001 AI Management	 SOC 2 Type II Security controls
 ISMS-P InfoSec & Privacy	 ISO/IEC 27001 Information Security
 ISO 27701 Privacy Management	 ISO 27017 Cloud Security
 ISO 27018 Cloud Privacy	 CSA STAR L1 Cloud assurance
 CSA STAR L2 Cloud assurance	 PCI DSS Payment security
 GOOD Software Level 1	 KSEL Security function

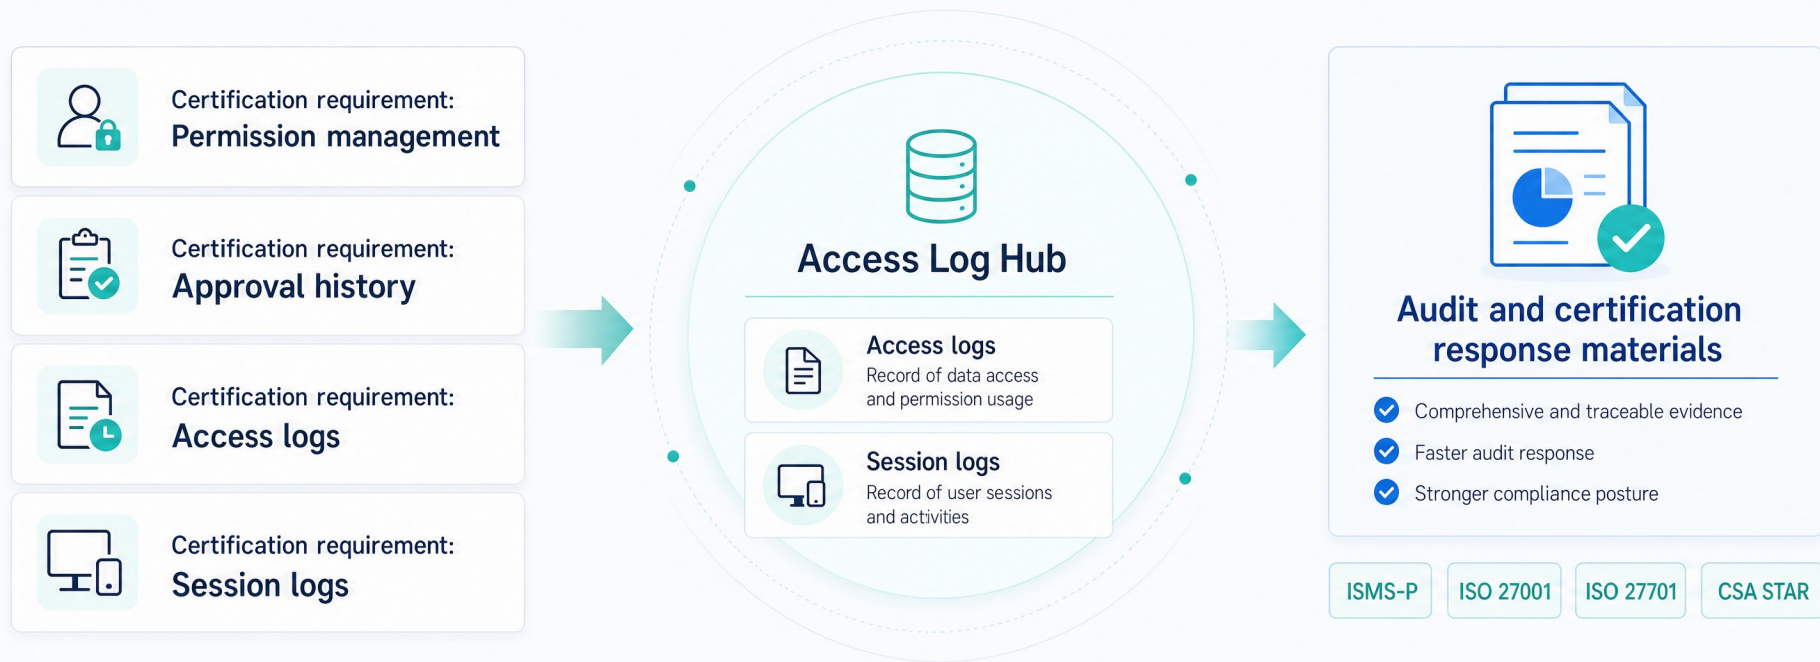

ACP unifies enterprise access paths

User requests pass through ACP before reaching data, systems, Kubernetes, web, and MCP infrastructure.

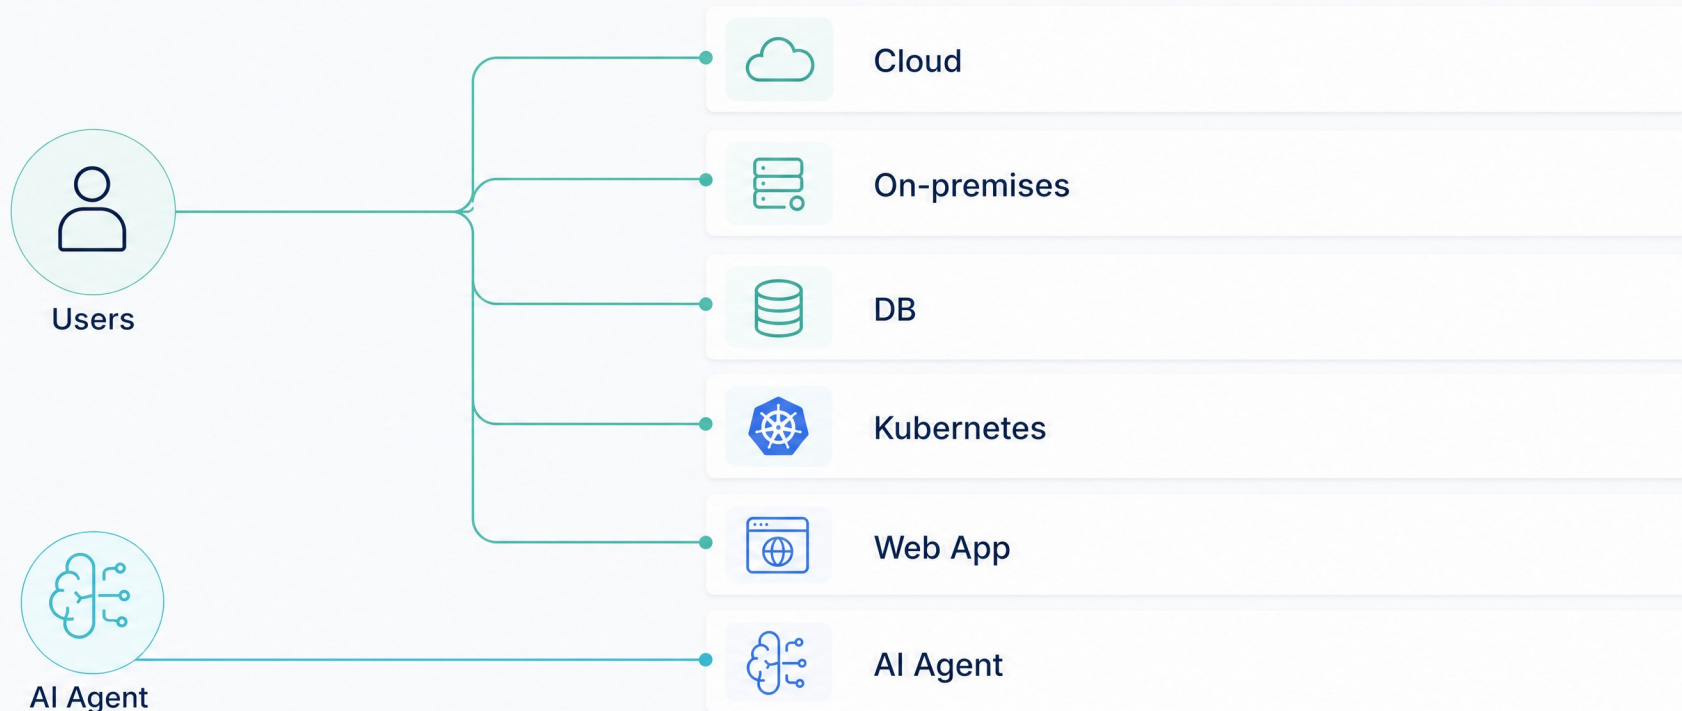

Access logs support certification readiness

Permission, approval, access history, and session logs become audit and certification response materials.

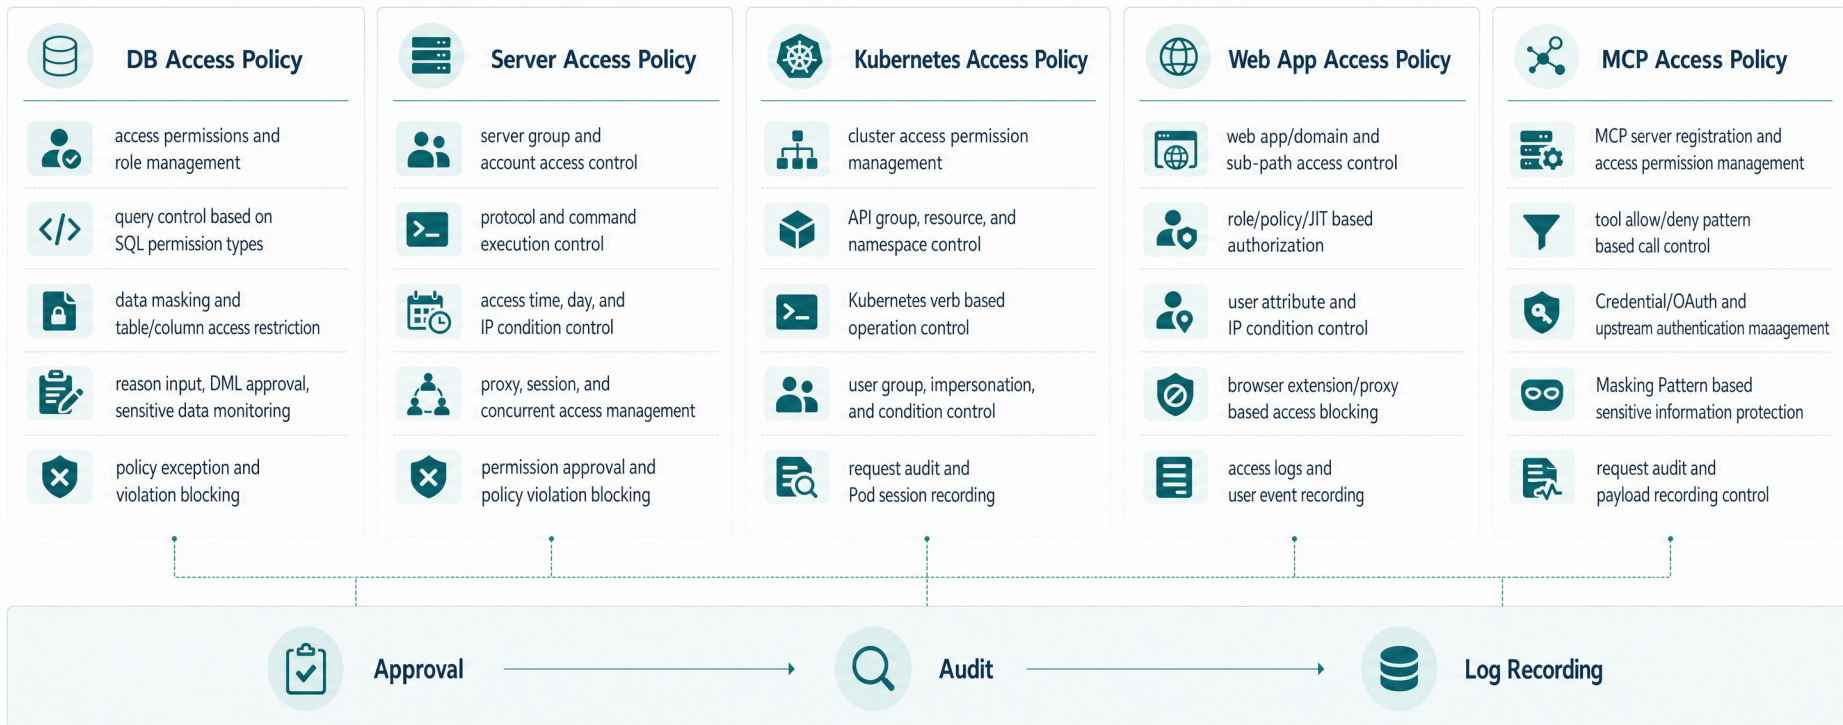

Cloud rapidly expands control targets

DB, servers, Kubernetes, web apps, and agent access paths grow together.

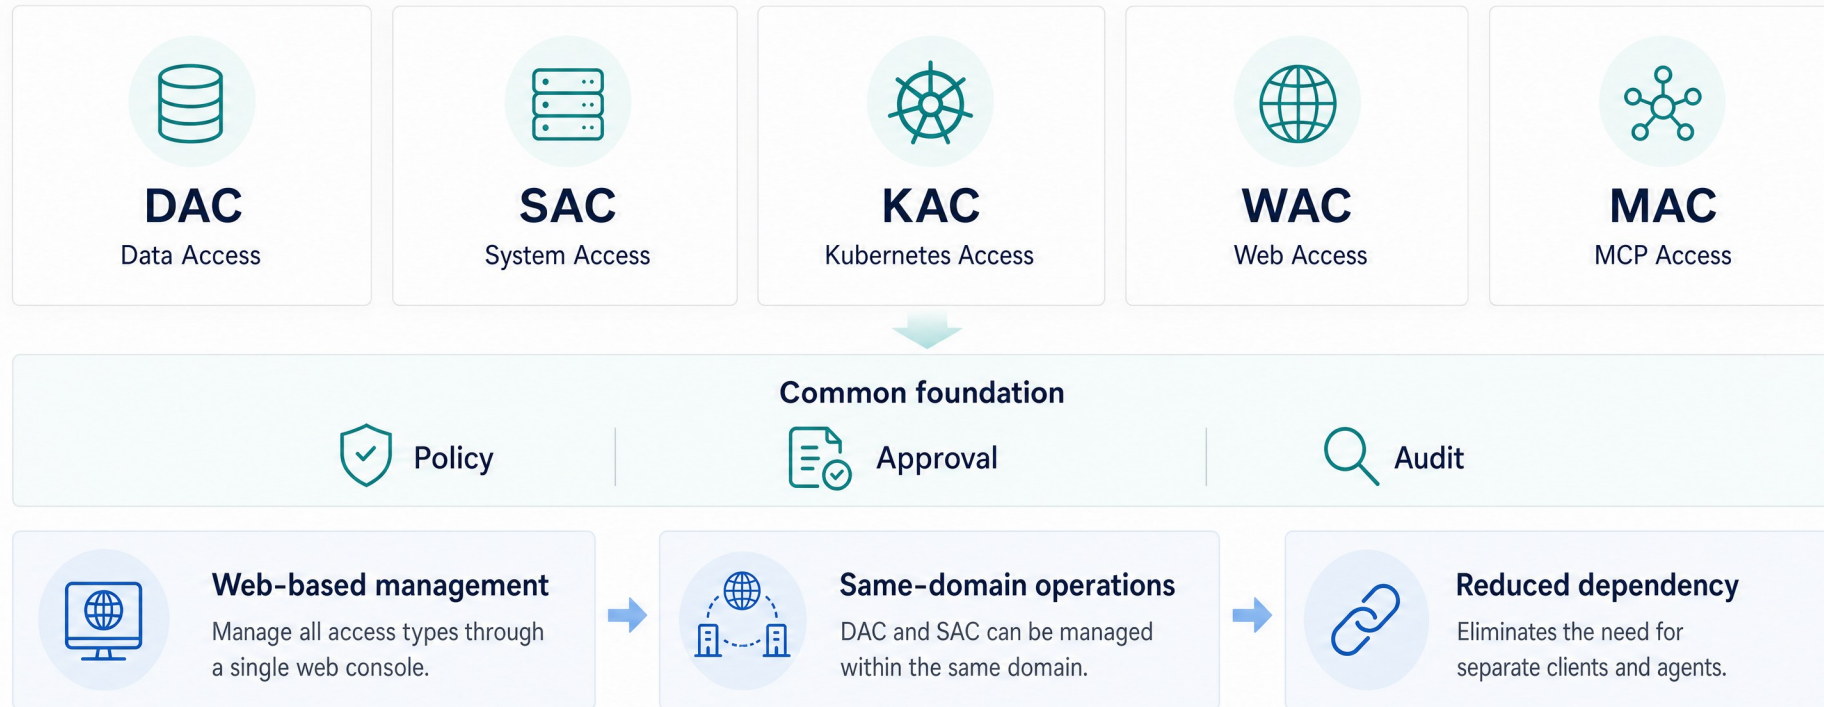

Manage target-specific policies in detail

Operate separate permission, condition, approval, and audit policies for DB, Server, Kubernetes, Web App, and MCP.

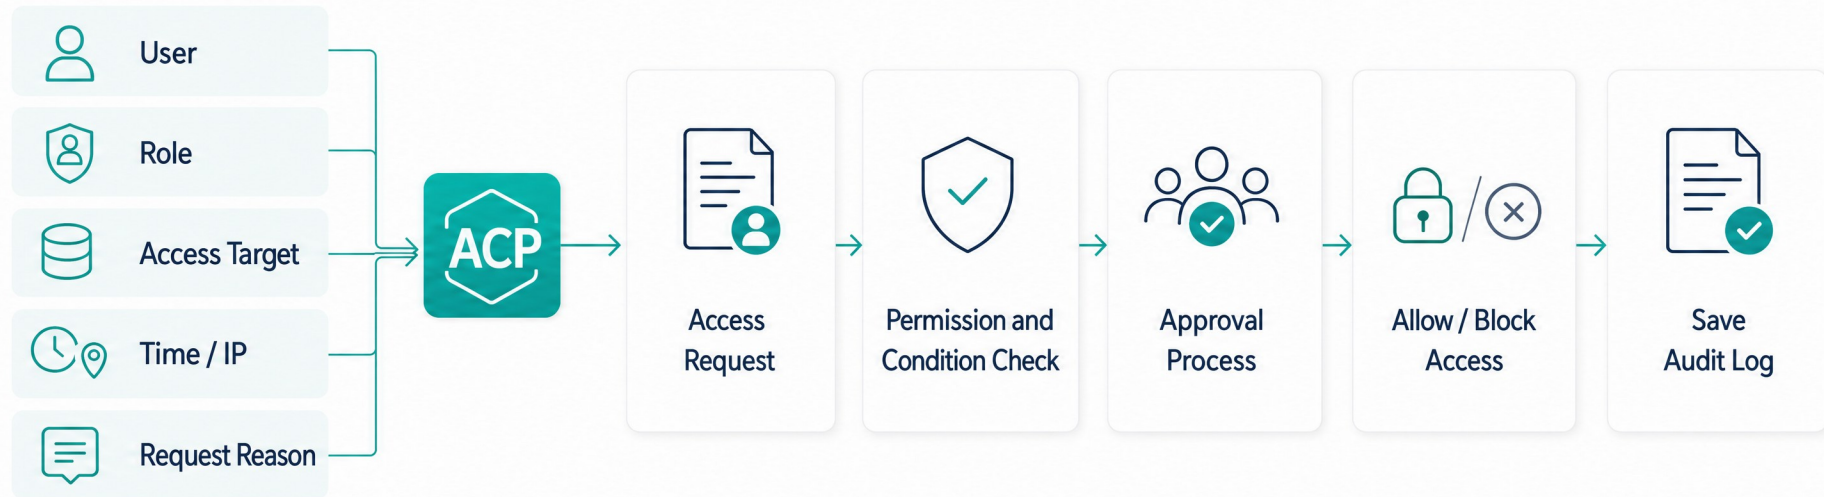

ACP unifies the access control suite

Web-based management in one domain reduces operational dependency and unifies access control.

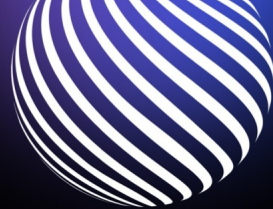

ACP checks permissions and request conditions

ACP records user, role, target, time/IP, reason, approval result, and audit logs.

Decisions and approval results are recorded as audit logs and become the basis for audit and certification response materials.

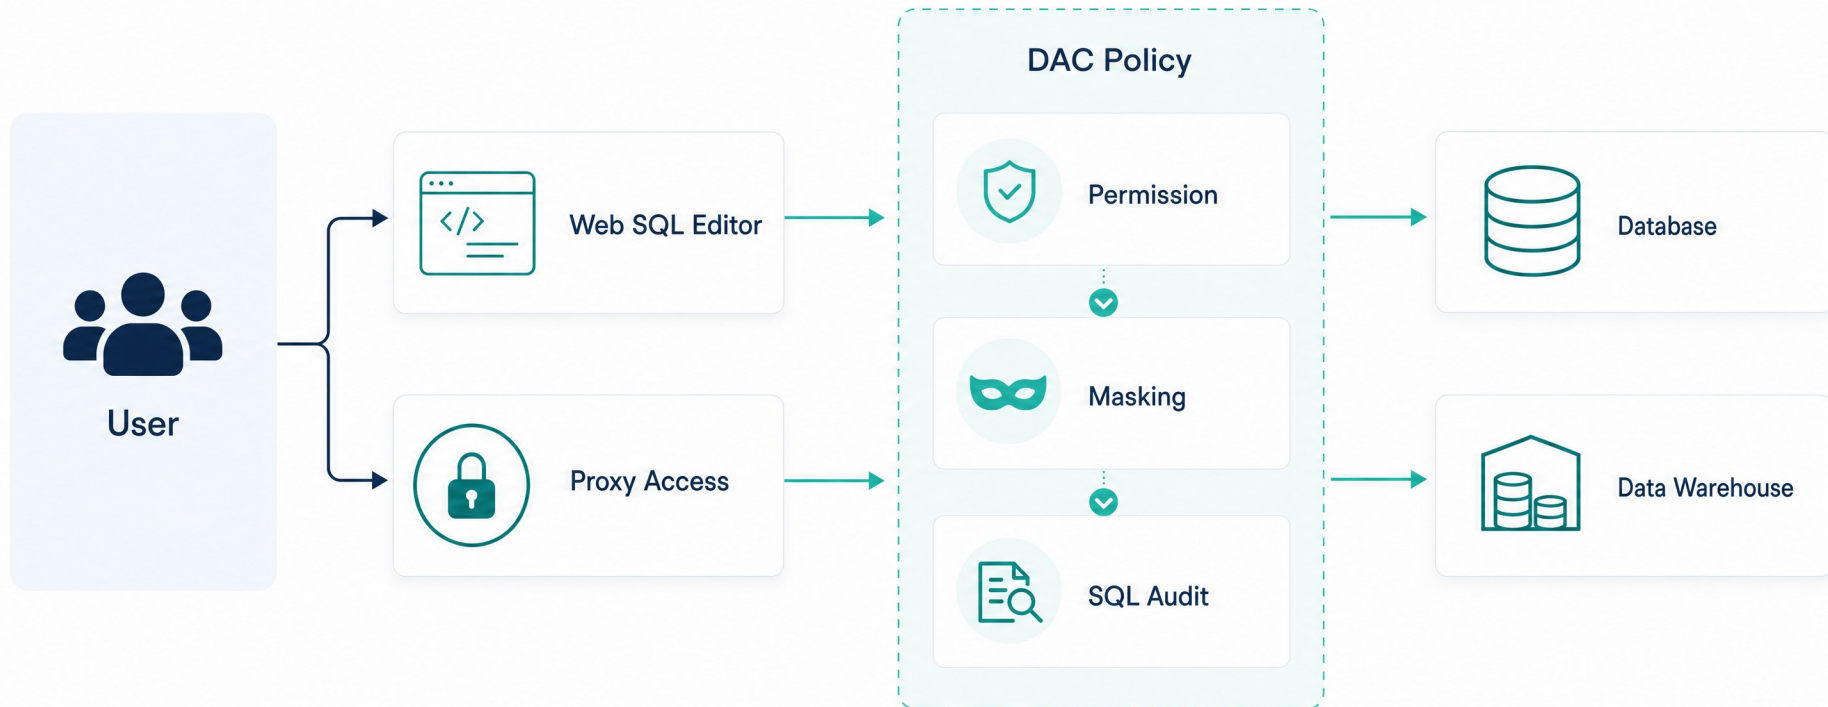

QueryPie AI

DAC

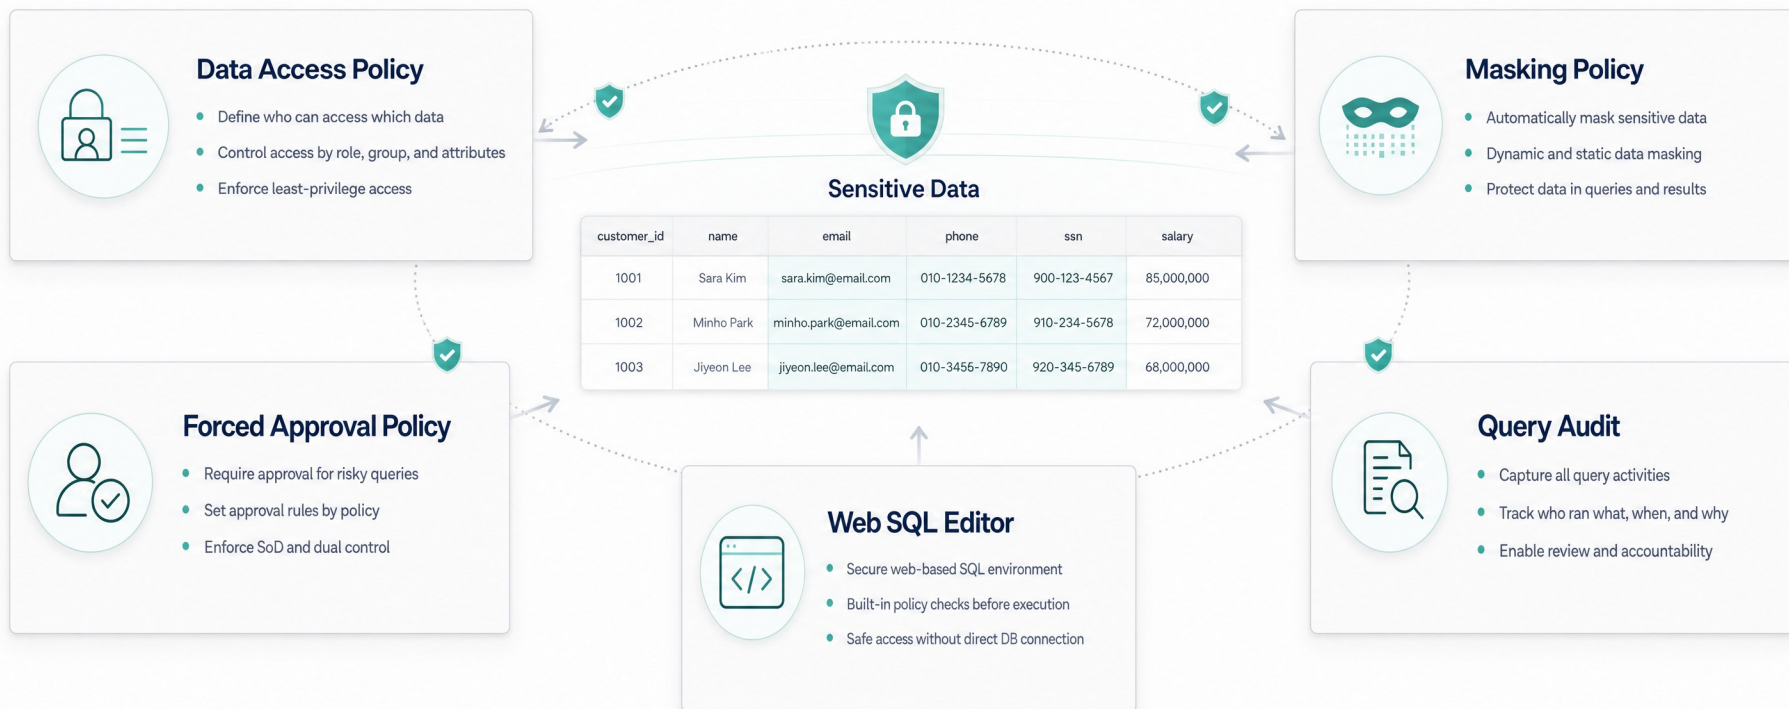

Control data access at fine granularity

Apply permission, masking, and SQL audit logs to DB and data warehouse access.

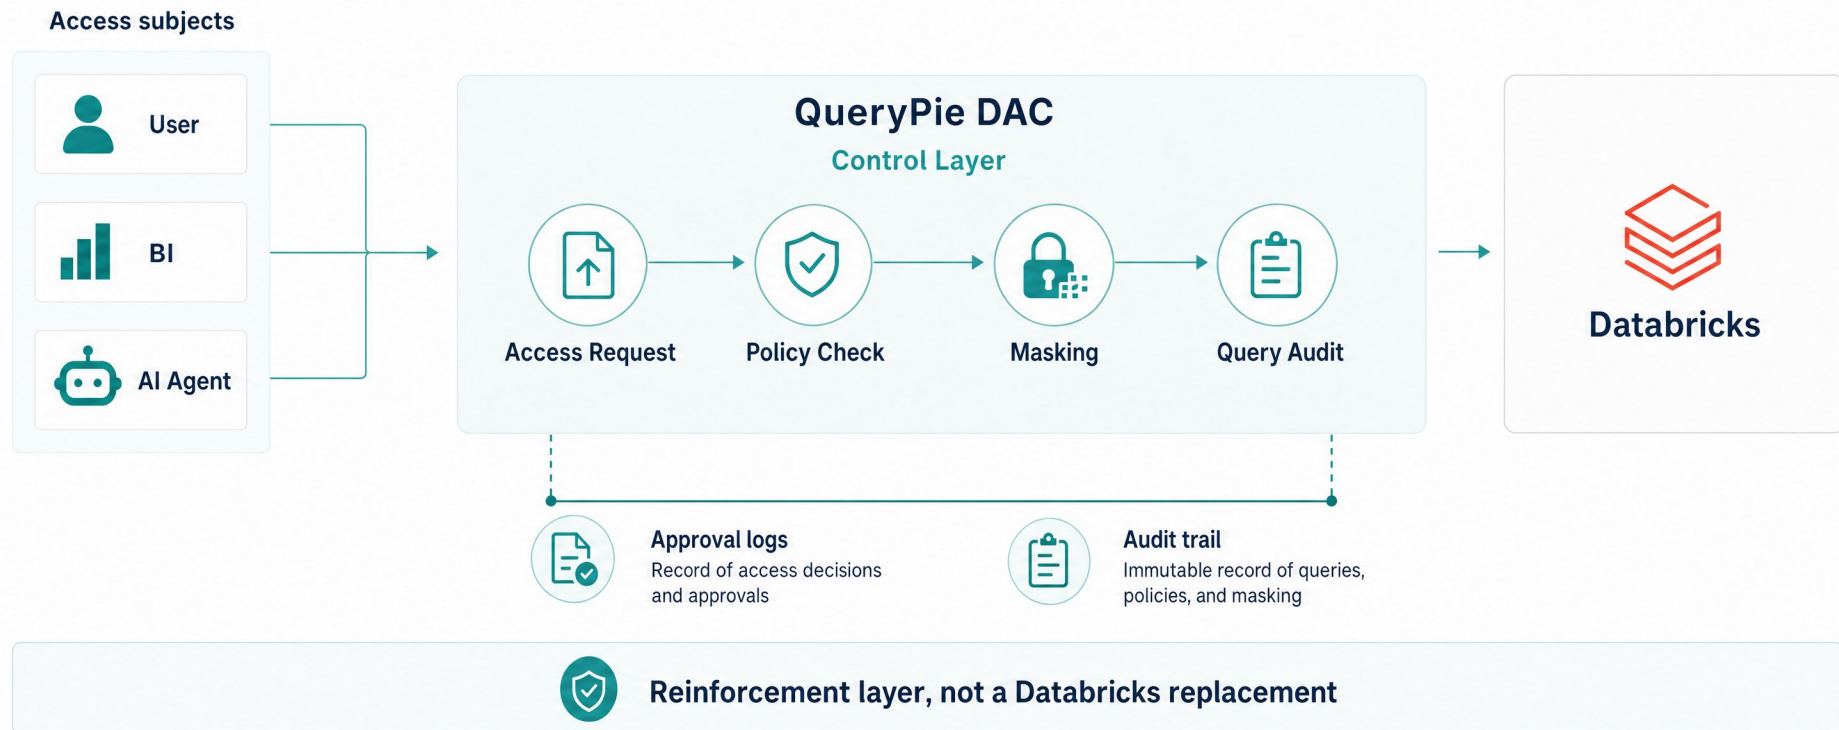

Sensitive data stays inside policy and audit

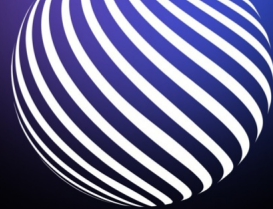

Control data use with Data Access, Masking, forced approval policy, and Query Audit.

Control Databricks access with approval and audit

Operate BI, user, and agent access with QueryPie DAC policy, masking, approval, and audit logs.

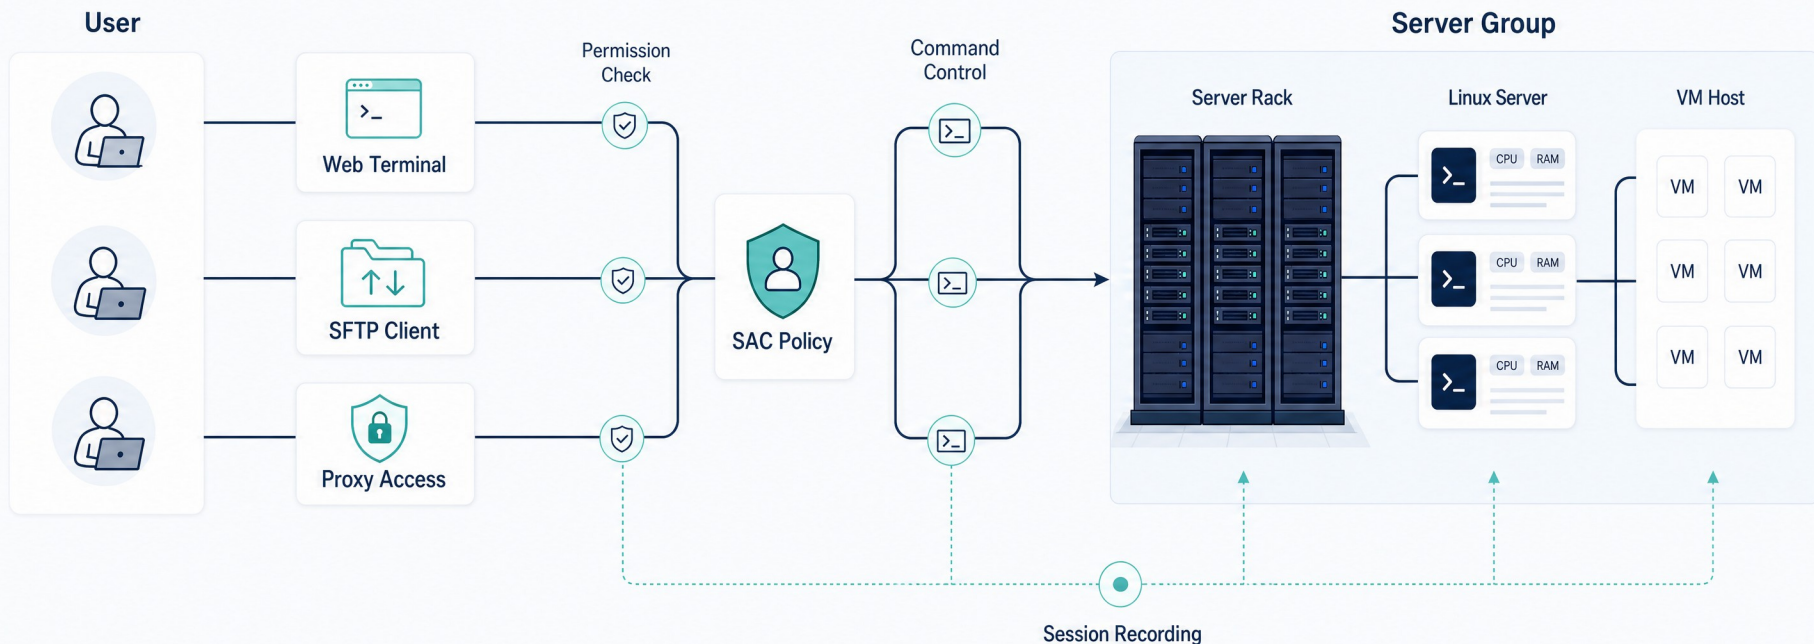

QueryPie AI

SAC

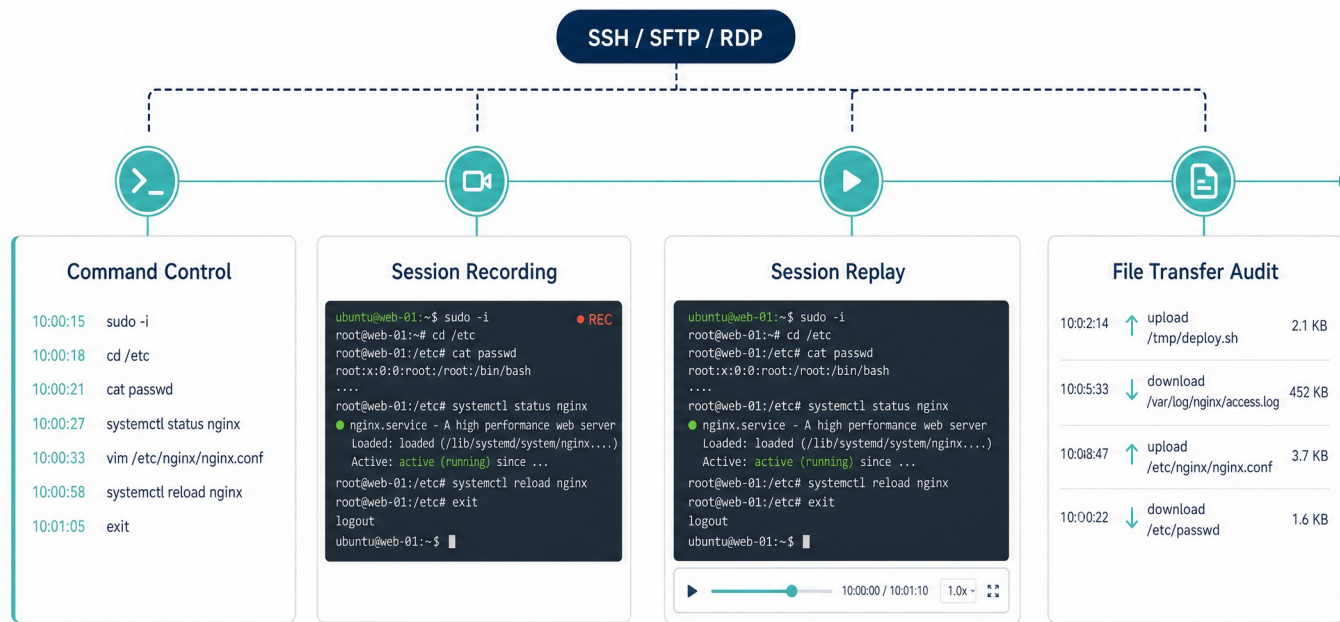

Centrally manage server and system access

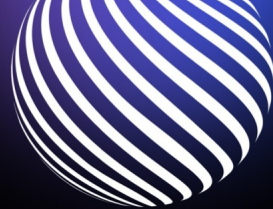

Control SSH, SFTP, and RDP access with web terminal, proxy, and session recording.

Track commands and sessions end to end

Provide Server Group, command control, session recording, Session Replay, and file transfer audit.

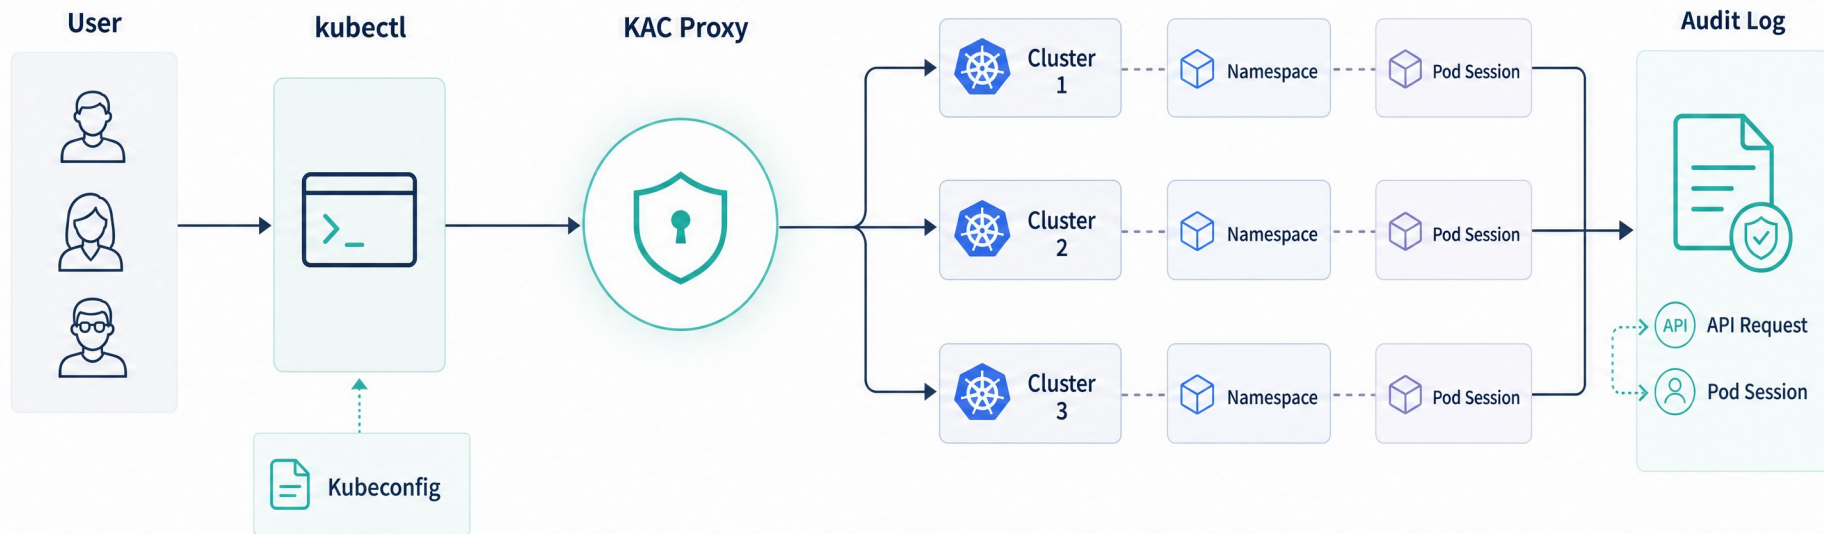

QueryPie AI

KAC

Control Kubernetes access at API level

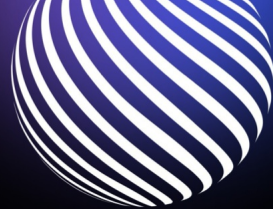

Keep multi-cluster access, kubeconfig, API requests, and Pod sessions under policy and audit.

Centralize RBAC management by cluster

Provide RBAC/ABAC, Auto Kubeconfig, Multi-cluster Policy, API Audit, and Pod Session Recording.

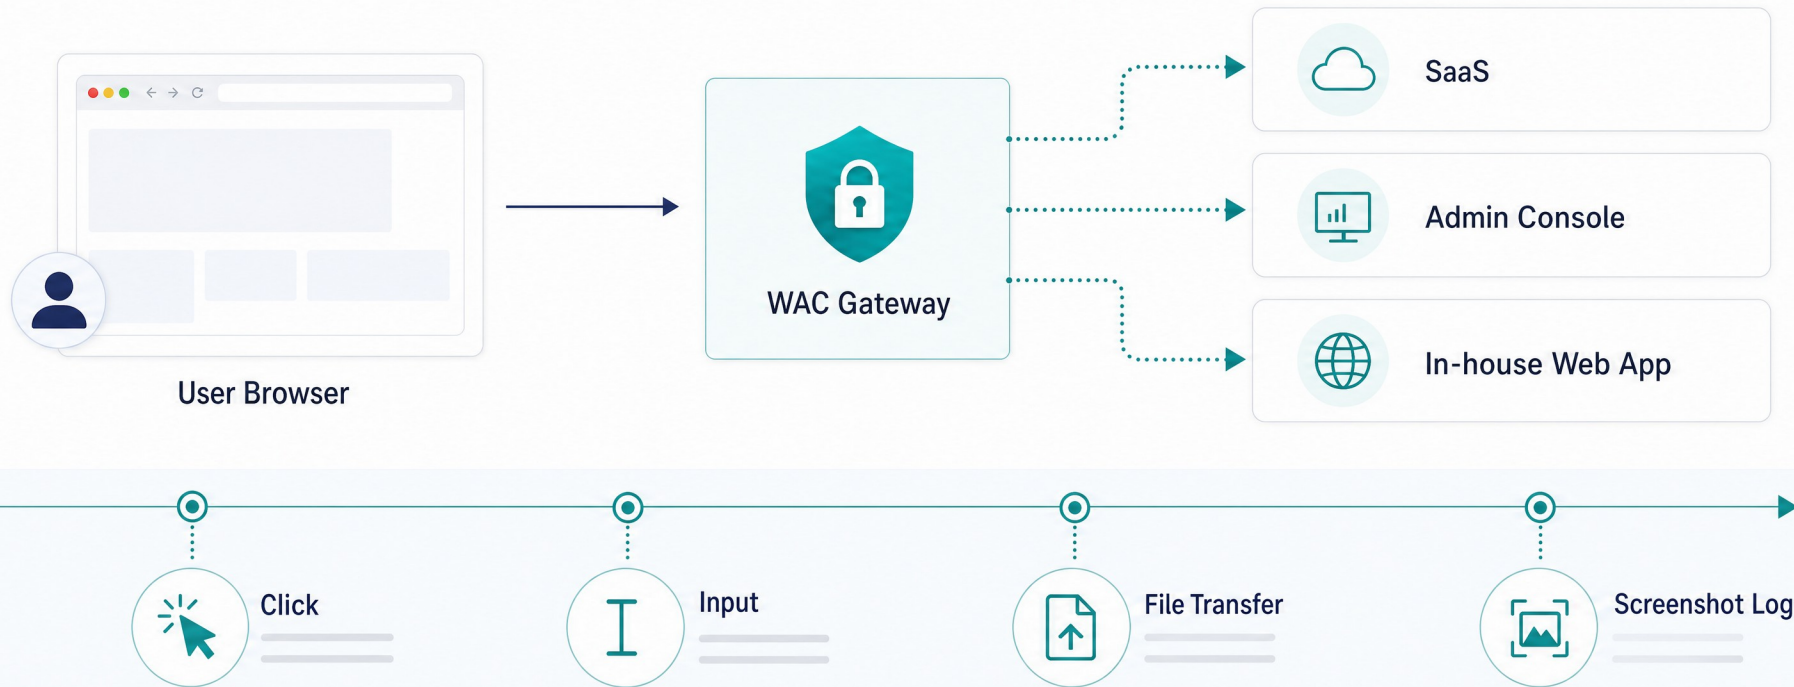

QueryPie AI

WAC

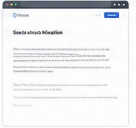

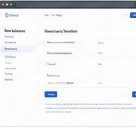

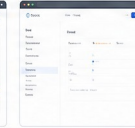

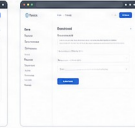

Web application access is also controlled

Record sessions, clicks, file transfers, and screen history for SaaS, admin consoles, and internal web apps.

Browser activity remains on a timeline

Audit web access through URL navigation, clicks, inputs, copies, file transfers, and screenshots.

Time	Event
09:14:03	 URL Navigation https://docs.example.com/getting-started
09:14:05	 Click Event Clicked on Get Started
09:14:12	 Text Input Entered "project_name_2025" in input field
09:14:28	 Clipboard Copy Copied "API_KEY_*****"
09:14:45	 File Transfer Uploaded requirements.xlsx (24.8 KB)
09:15:02	 Screenshot Timeline  09:15:02  09:15:12  09:15:22  09:15:32  09:15:42 

Audit Review
Review and assess the recorded web activity.

QueryPie AI

MAC

Control MCP and Agent tool calls

Manage MCP Server and Tool Scope used by AI Agents with permission, policy, and audit standards.

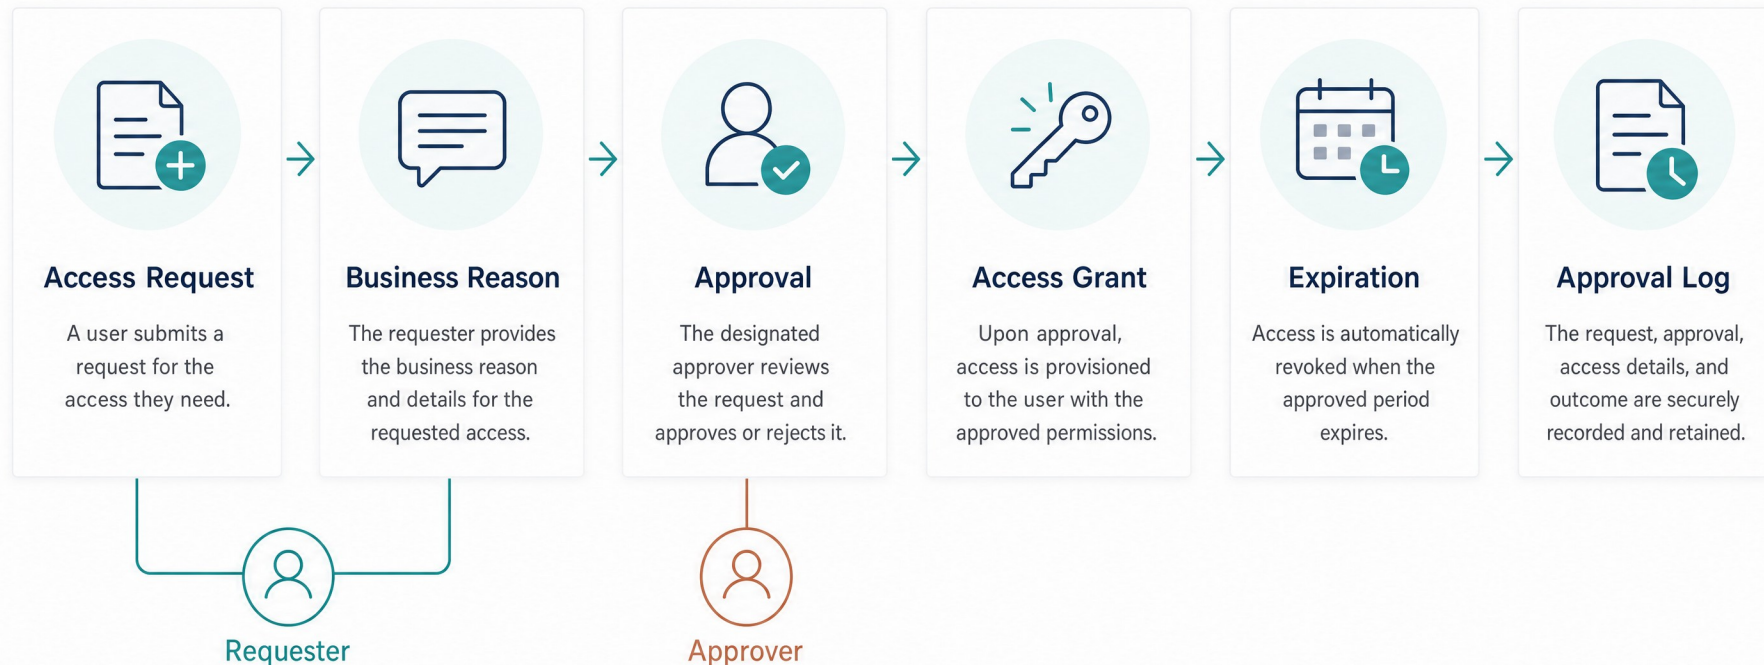

MCP is an access path to open safely

MAC provides Tool Scope Policy, Response Masking, Request Audit, and Agent Permission.

Operate needed access inside approval flows

Support least-privilege operations through reason, approval, grant, expiration, and log retention.

Verify every access through audit logs

Review connection, query, command, API, web behavior, and MCP call history through audit logs.

Operational logs support certification materials

Teams build materials from QueryPie logs, while AI Chat can assist search, summaries, and drafts.

AI execution works with a control layer

AIP runs Agents, while ACP provides data, tool, system access, and audit boundaries.

Execution Layer: AIP

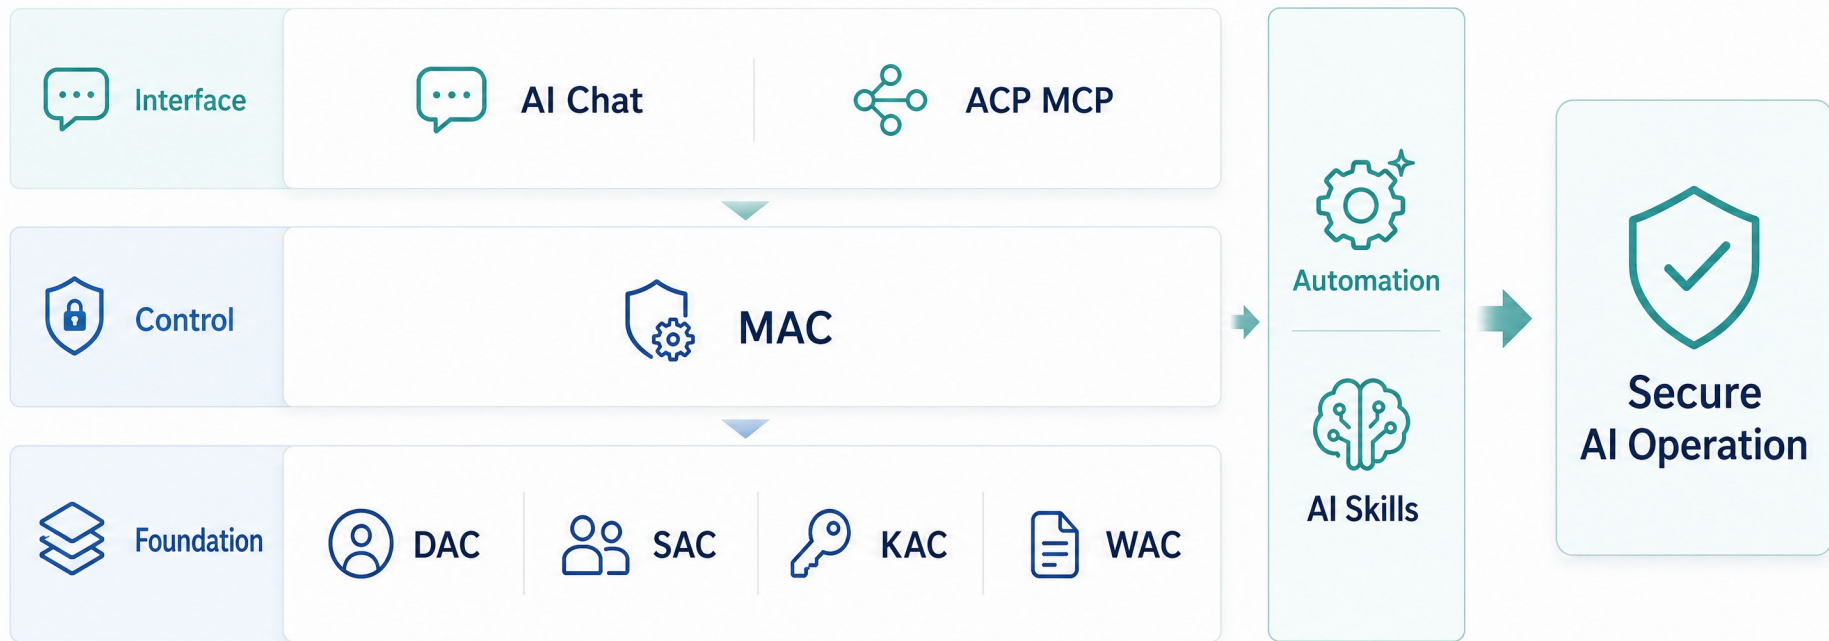

Control Layer: ACP

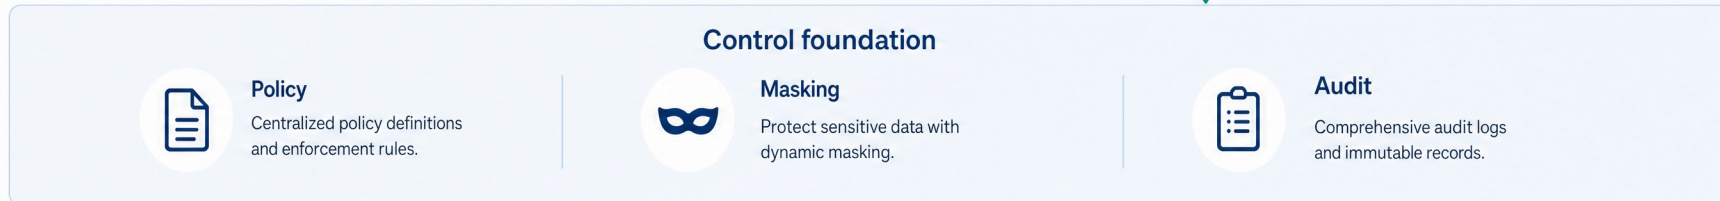

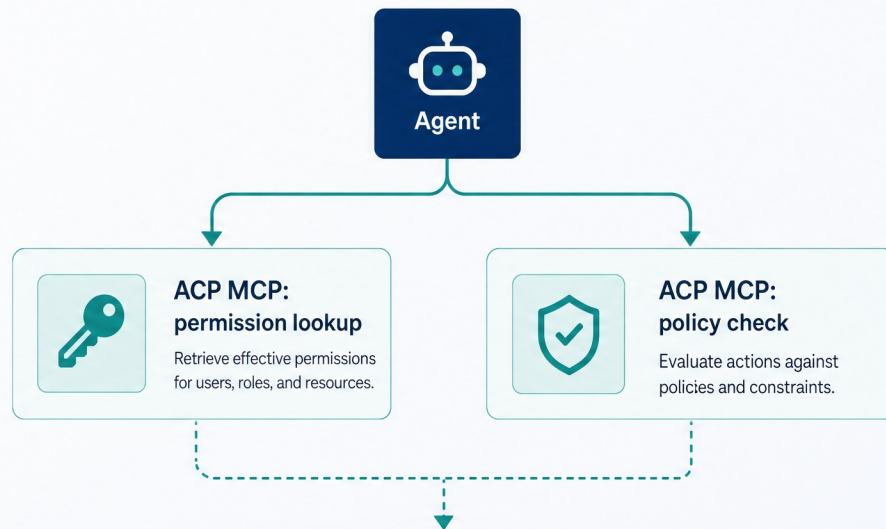

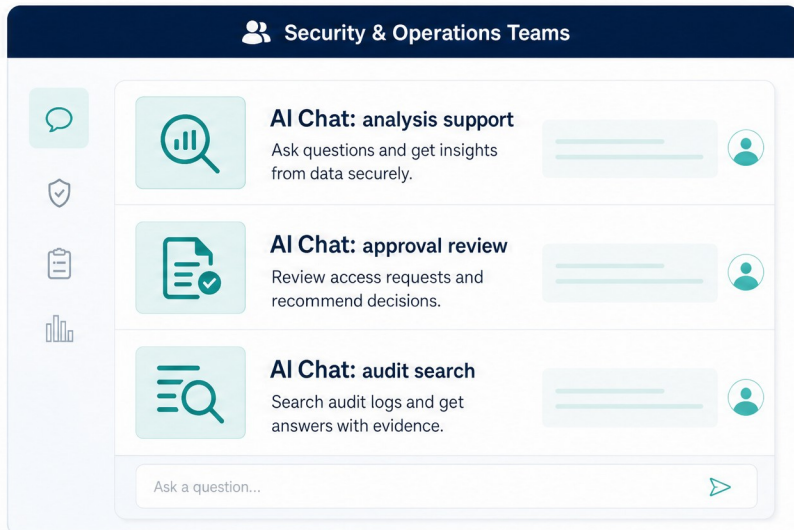

Start secure AI work on ACP

AI Chat, ACP MCP, MAC, and AI Skills run on top of the existing ACP control foundation.

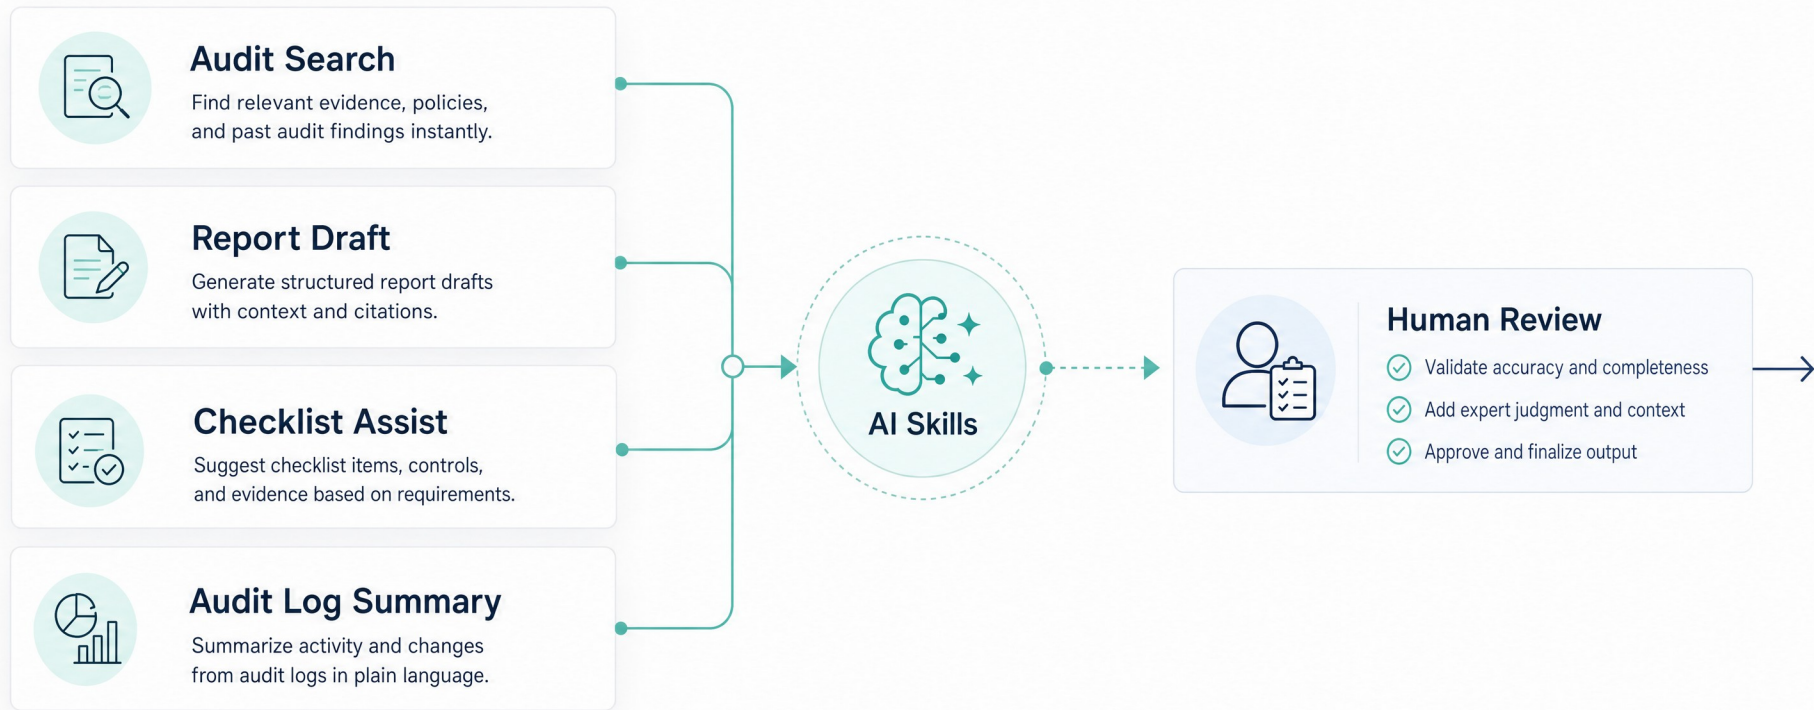

AI assists and acts inside security context

Natural language supports analysis, approval review, and audit search while Agents run within QueryPie permissions.

AI assists audit work

AI Skills help audit search, report drafting, and recurring checks while reviewers make final decisions.

Expand from one access path to full control

Start with DAC or SAC, then expand control coverage to KAC, WAC, MAC, and AI Pack.

Choose ACP pricing by adoption scale

Community, Standard, and Enterprise plans are organized by users, control scope, and support.

Community

Download a free Community edition license with the same quality

Free

up to 5 users

[Install now](#)

- ✓ database access control
- ✓ system access control
- ✓ Kubernetes access control
- ✓ request and approval workflow

- ✗ web access control excluded
- ✓ MCP access control included
- ✓ AI extension features included

Standard

Available only to users satisfied with the Community edition, annual billing only

\$50/month/user

minimum 10 users

[Buy](#)

- ✓ database access control
- ✓ system access control
- ✓ Kubernetes access control
- ✓ request and approval workflow

- ✗ web access control excluded
- ✓ MCP access control included
- ✓ AI extension features included

- ✓ online technical support
- ✗ technical onboarding excluded
- ✗ software upgrade support excluded

Enterprise

Recommended for teams that need professional adoption support and services
