Our Journey: Raised \$30M+ in Total Funding

Enterprise AI Work OS connecting AI execution and access control

AIP and ACP extend enterprise AI execution and control across AI Pack, FDE, and Apps.

Company Basic Information

Founded	2017
CEO	Hwang Inseo
Website	www.querypie.com
Employees	65
Locations	US · Korea · Japan · Indonesia

Solution Portfolio

Enterprise AI Work OS

AI execution + access control + AI Pack + FDE

AIP

AI Agent execution platform
MCP · RAG · Skills

ACP

AI Control Platform
DB · Server · Web · MCP

AI Pack

AI business security expansion
AI Chat · MAC · UEBA

FDE

field-based AI adoption
PoC · custom Agent

Apps

White-label / Apps partner AI services

Certifications

 ISO 27018 Cloud Privacy	 CSA STAR L1 Cloud assurance
 CSA STAR L2 Cloud assurance	 PCI DSS Payment security
 GOOD Software Level 1	 KSEL Security function

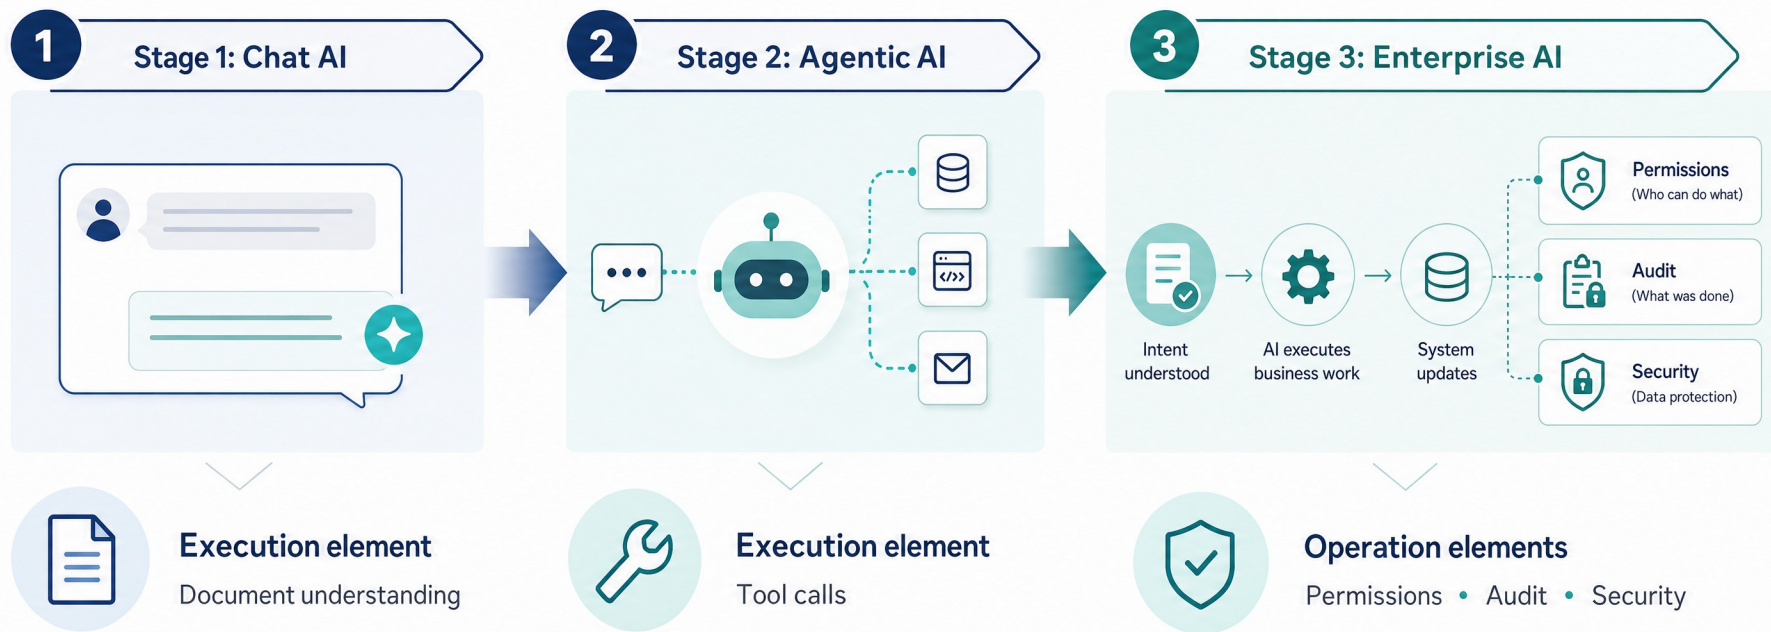

AI Platform for building and operating enterprise AI Agents

AIP brings LLMs, Agents, MCP, Skills, Automation, and secure operations into one product experience.

AI now executes work beyond answering questions

Enterprises need an execution environment where AI reads documents, calls tools, and updates systems.

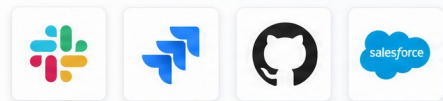

Connect scattered tools and data into one AI workspace

When SaaS, files, DBs, and internal systems are separated, AI cannot complete work end to end.

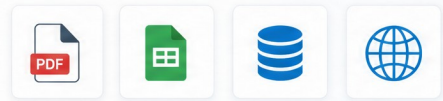

Scattered tools:

Slack, Jira, GitHub, Salesforce

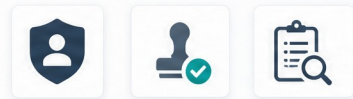

Scattered data:

files, documents, DB, web sources

Scattered operations:

permissions, approvals, audit

Result: connected work execution

Unified context across tools and data

Aligned teams and clear ownership

Consistent permissions and approvals

Traceable actions and audit trail

Faster decisions and execution

AIP is an integrated product for AI work operations

Chat, Agents, My Drive, Skills, Automation, MCP, AIP Apps, and Admin are provided in one platform.

Use multiple LLMs for different work purposes

Users select premium LLMs and connect files and tools to conduct business-contextual conversations.

Add tools

Files become business knowledge for AI

Documents, spreadsheets, decks, and text are stored securely and used as context for chat and Agent execution.

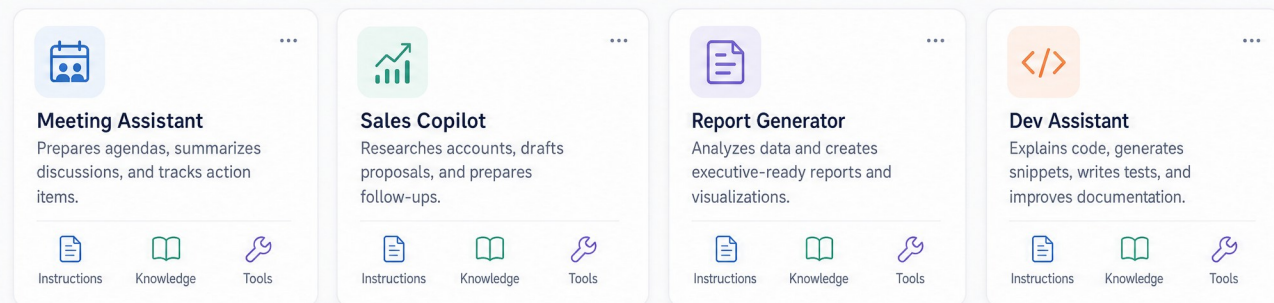

Repeated work becomes shareable Agents

Teams can create task-specific Agents, connect instructions and tools, and reuse them across the organization.

Agent Library

Work Agents: meetings, sales, reports, development

Components: instructions, knowledge, tools

Instructions

Define agent behavior, guidelines, and response rules.

Knowledge

Provide domain context, documents, and reference materials.

Tools

Enable actions through integrations and reusable capabilities.

Operation state: create, test, deploy

Create

Design and configure your agent.

Test

Validate behavior and refine performance.

Deploy

Publish and make the agent ready to use.

Sharing scope: personal, team, organization

Personal

Only you can view and use this agent.

Team

Shared with selected team members.

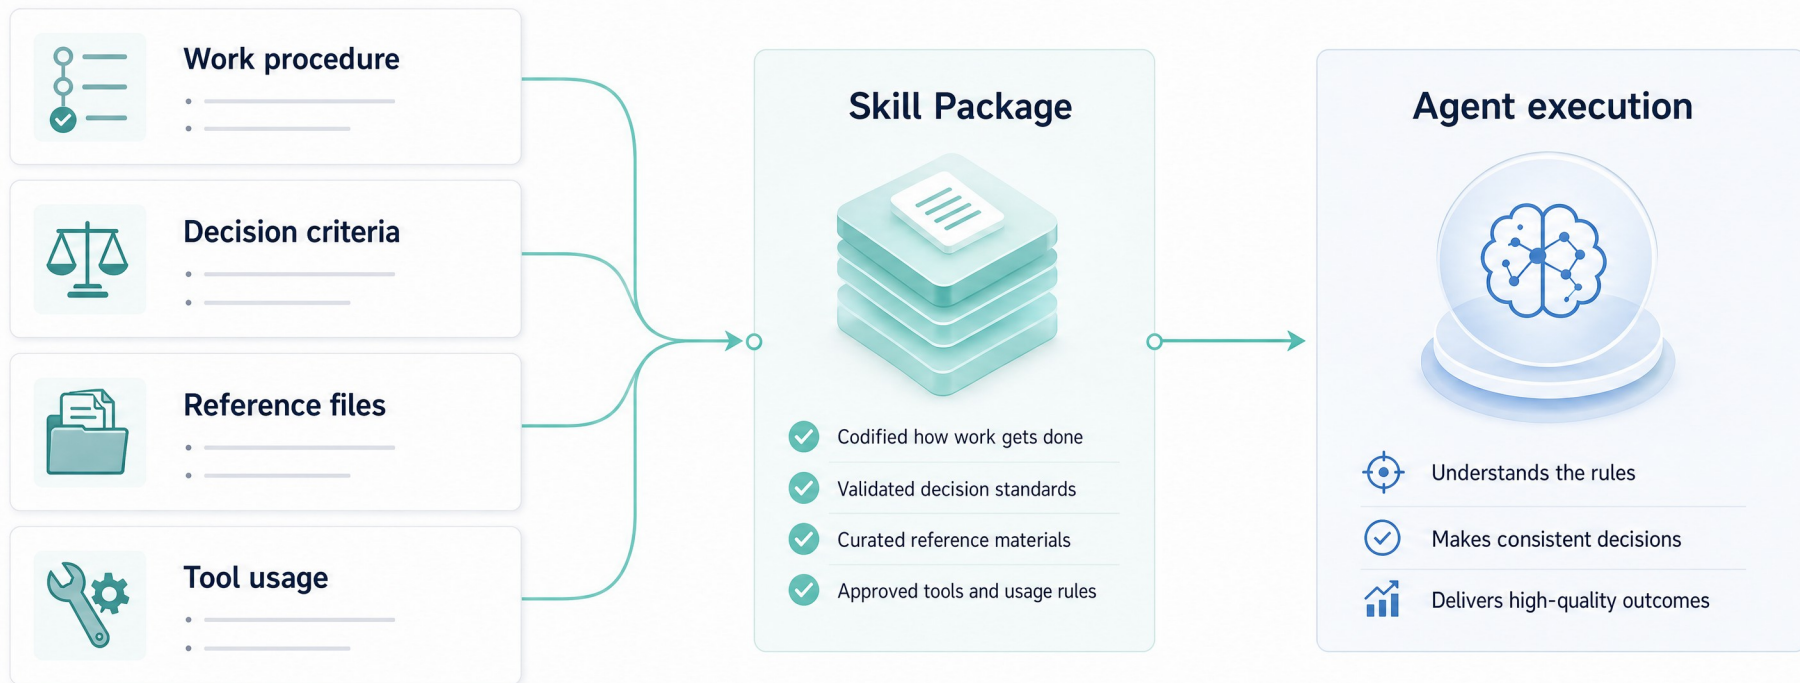

Organization

Available to all members in the organization.

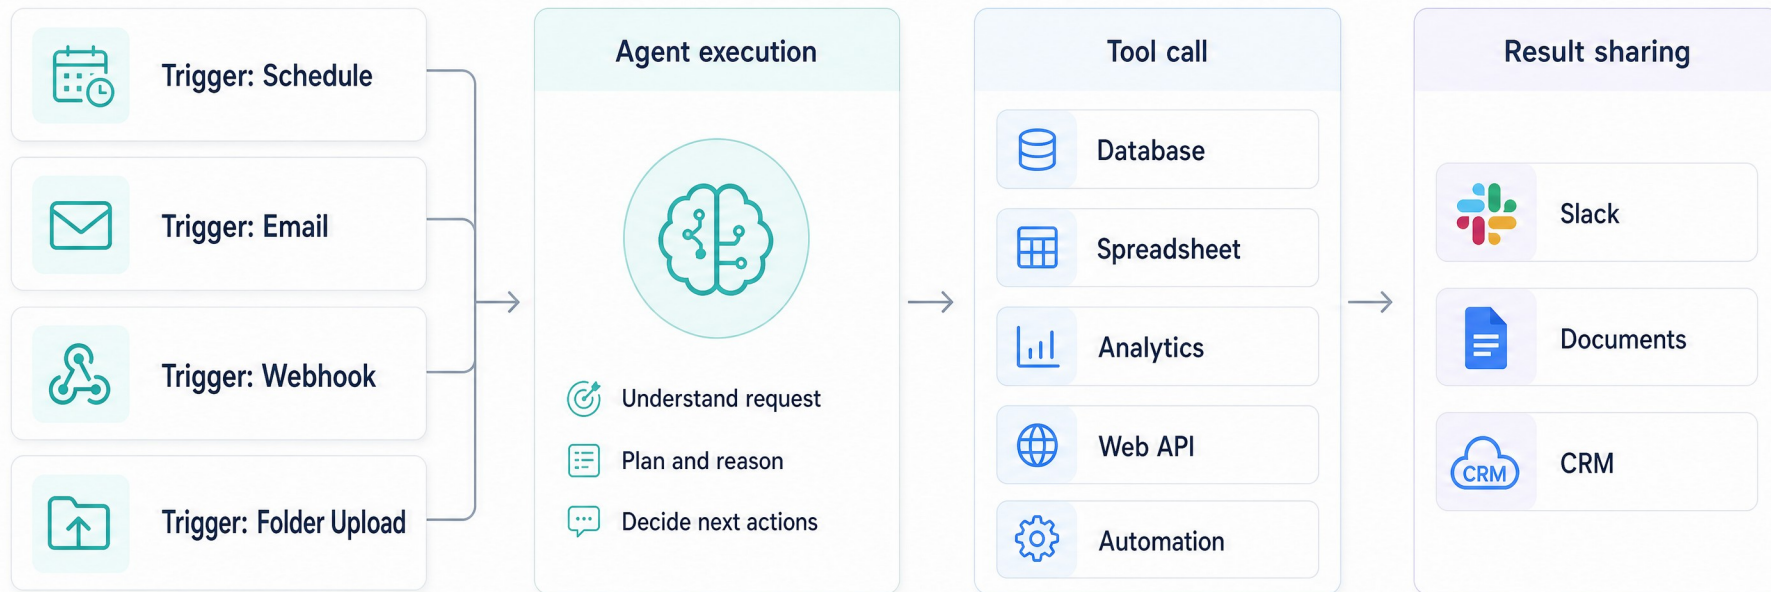

Teach AI the way your company works

Procedures, decision criteria, reference files, and tool usage are packaged as Skills for contextual AI execution.

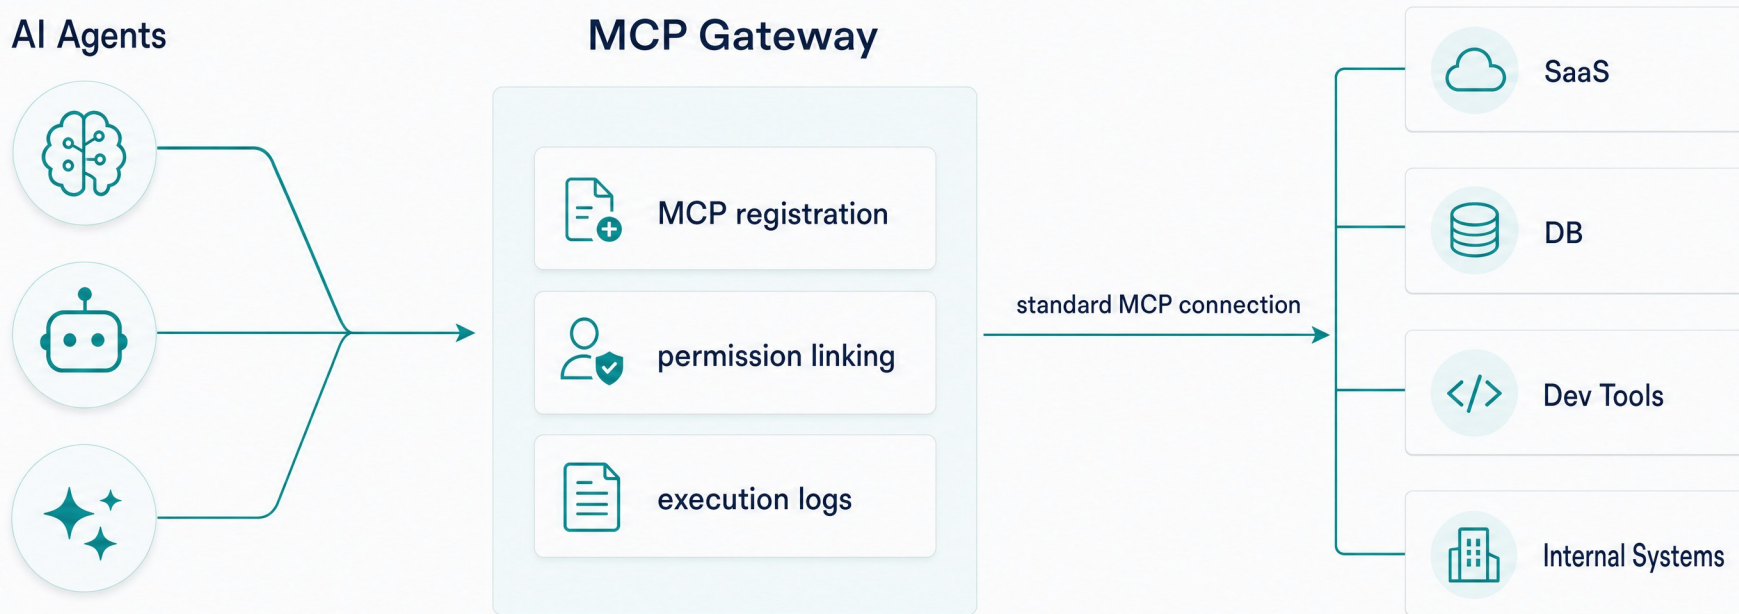

Agents run based on events

Schedules, emails, webhooks, and external automation tools trigger Agents to process recurring work.

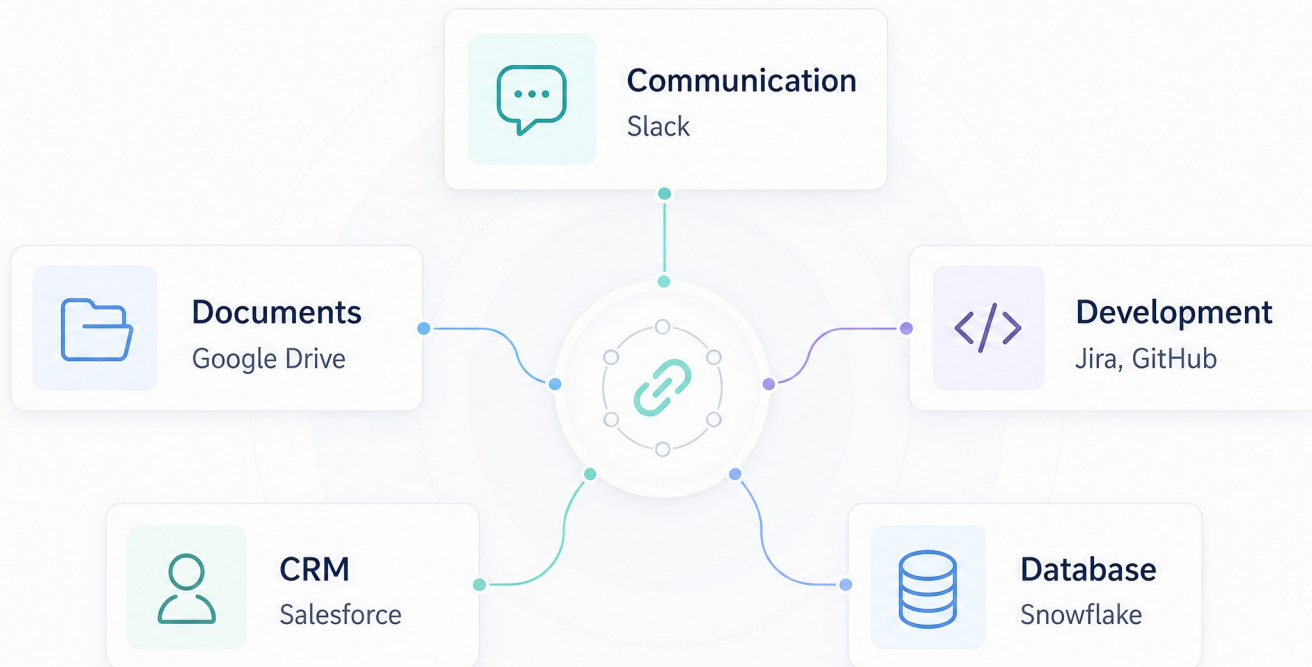

Connect enterprise tools safely with AI

MCP Gateway centrally registers enterprise MCPs and records execution logs to track tool usage.

Connect work tools in just a few clicks

Google, Slack, Jira, GitHub, Salesforce, DBs, and other tools can be included in Agent execution.

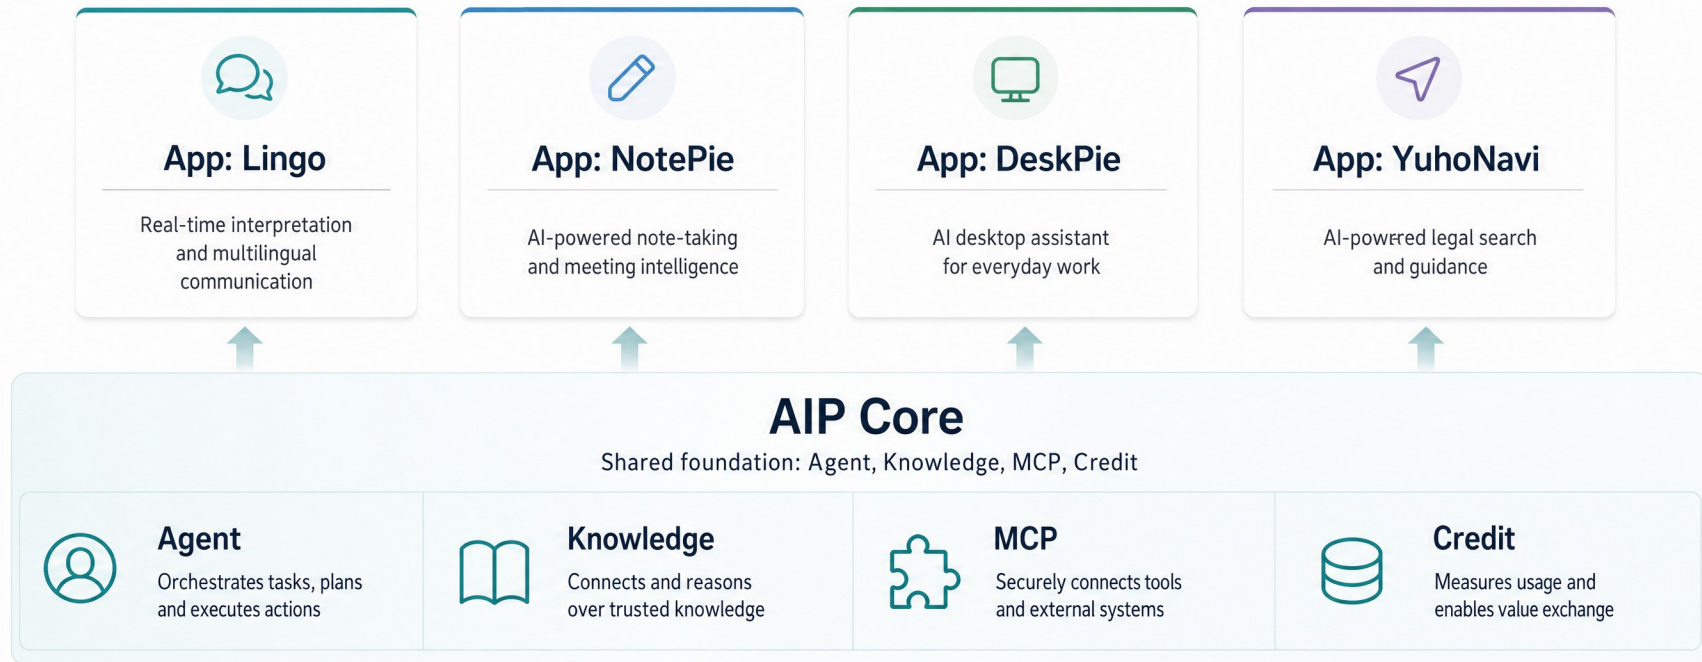

Connect internal systems securely

Edge Tunnel connects internal systems to AIP Agents without major changes to firewall architecture.

Product capabilities extend into work apps

AIP Apps such as Lingo, NotePie, DeskPie, and YuhoNavi package AIP Agents, knowledge, and MCP capabilities into real work experiences.

User experience: complete work apps by task

Meetings move from records to execution

Real-time interpretation, meeting summaries, and business-system connections turn meeting context into follow-up actions.

Turn sourced knowledge work into deliverables

Based on documents, web sources, direct input, and Deep Research, NotePie creates verifiable answers, reports, and slide drafts.

Gateway authentication

Secure access through enterprise gateway and identity verification.

User data isolation

Strict isolation of user data across workspaces and tenants.

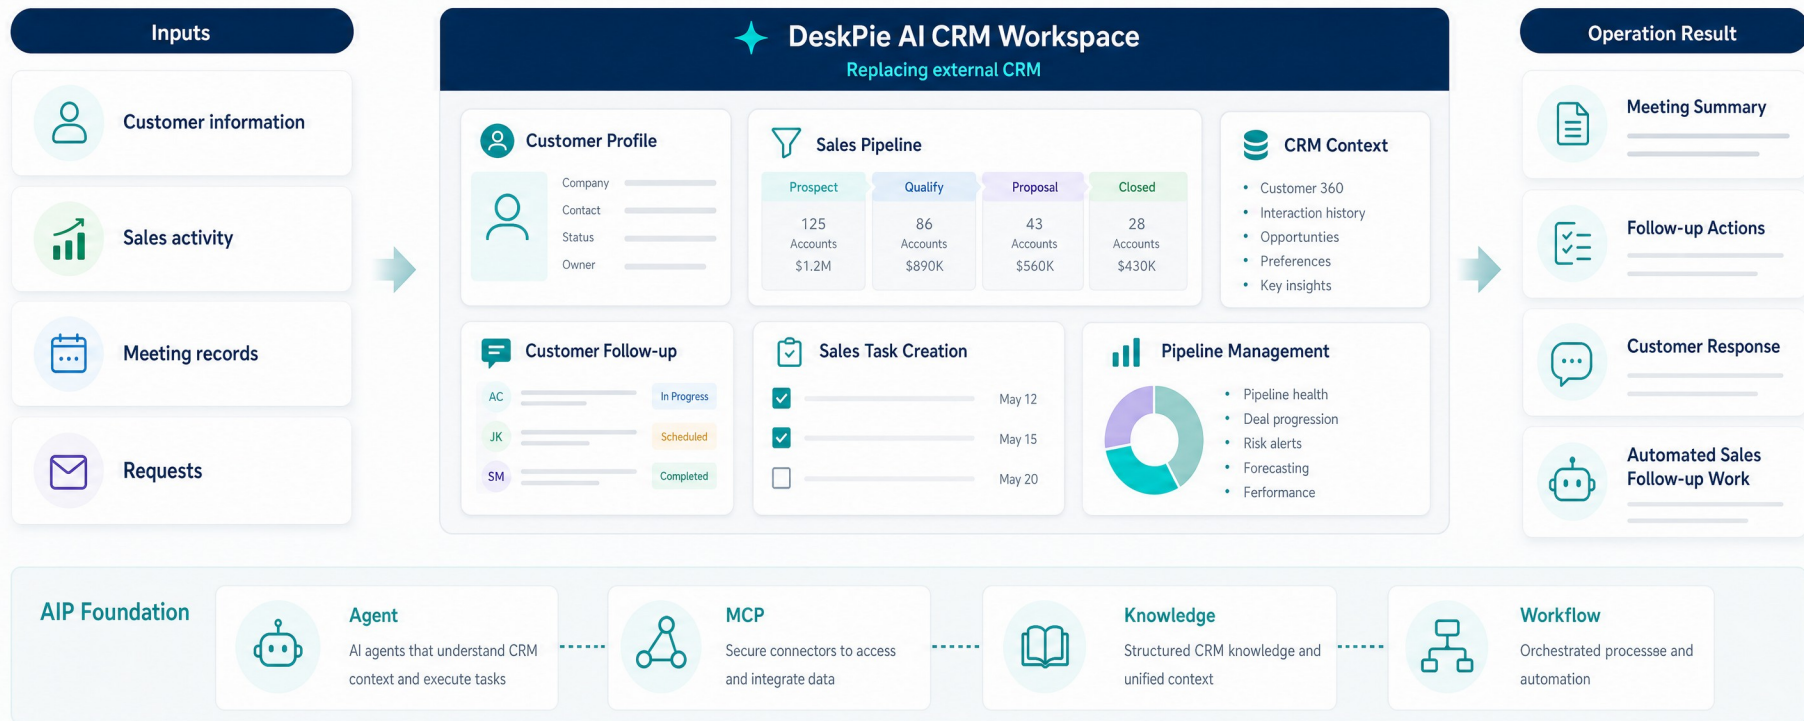

Credit

Credit-based usage with transparent consumption and control.

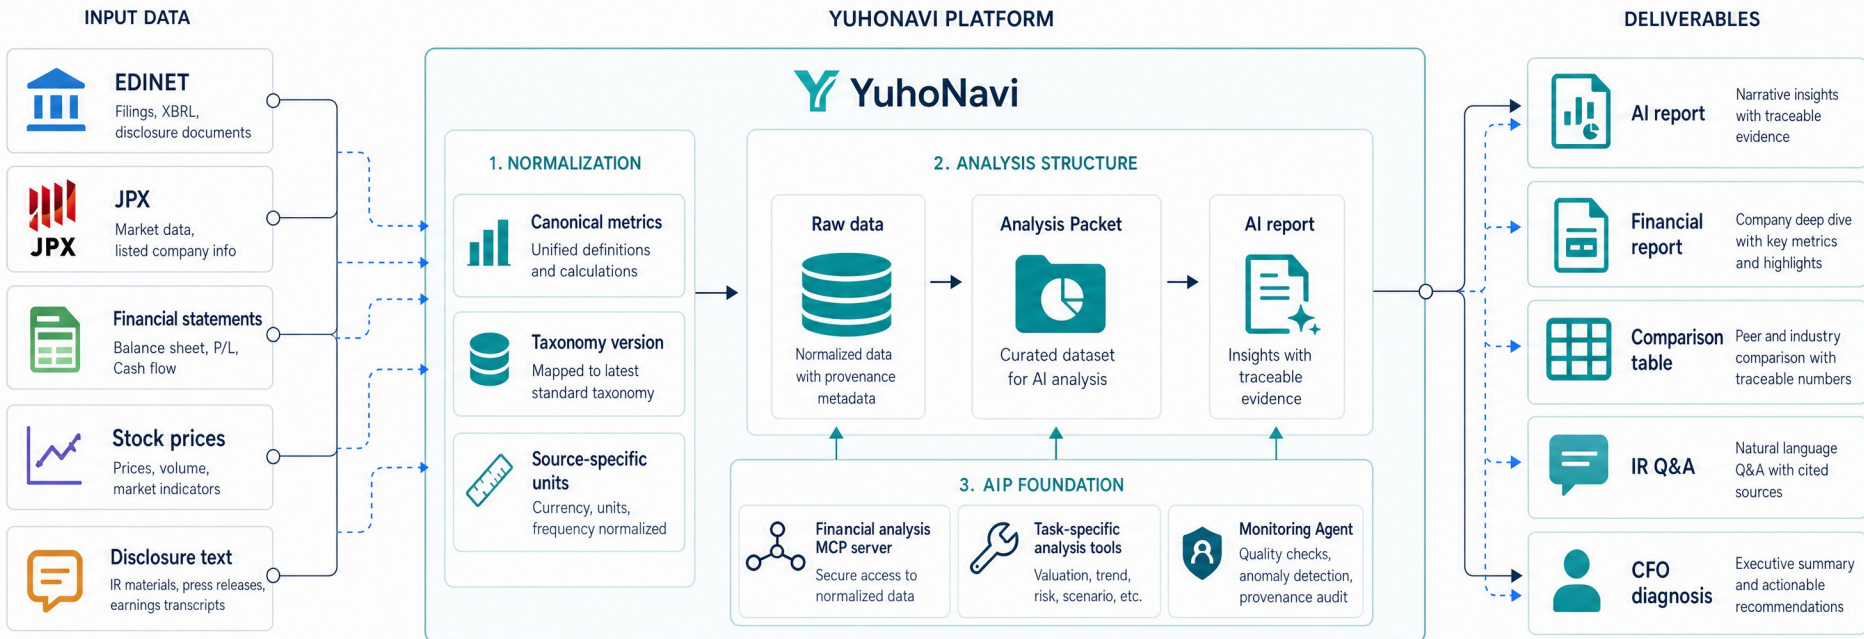

AI CRM Workspace replacing external CRM

Customer information, sales activity, meeting records, and follow-up tasks are connected into one Agent execution flow.

Turn Japanese disclosure data into AI-ready business knowledge

EDINET, JPX, financial statements, stock prices, and disclosure text become traceable analysis packets and reports.

Provide management capabilities for enterprise operations

Administrators centrally manage Agents, Knowledge, MCP, Skills, security policies, and audit logs.

AIP operates within authentication and logging

SSO, DLP, Audit Logs, and MCP execution logs track enterprise AI usage history.

Agent execution is completed with access control

If AIP is the execution layer, ACP and MAC control data access, tool calls, risky commands, and sensitive information.

Execution layer: QueryPie AIP

Control layer: QueryPie ACP

Partners can launch their own AI services faster

QueryPie AIP provides a white-label foundation that can expand into partner-branded AI services.

A partner AI platform case built on AIP

mitoco Buddy is a partner-branded service combining AIP, MCP, Security, and FDE.

Scale from a small work Agent to Enterprise AI

Start with one task Agent, add MCP and security controls, and expand into organization-wide AI operations.

CTA: start with one task

Choose the AIP pricing plan that fits your scale

Compare Starter, Team, and Enterprise plans by usage scale and operational needs.

Starter

Build your first AI workflow

\$20 /month

Subscribe

- ✓ 800 credits/month
- ✓ up to 5 custom AI agents
- ✓ 3 RAG knowledge bundles
- ✓ audit logs up to 30 days
- ✓ login IP ACL

Team

Collaborate and innovate together

\$500 /month

Subscribe

- ✓ 20,000 credits/month
- ✓ up to 30 custom AI agents
- ✓ 10 RAG knowledge bundles
- ✓ audit logs up to 90 days
- ✓ login IP ACL

Enterprise

Custom plan for large organizations
